\$DOT is so undervalued.
It'll pump in the following weeks. remember my words.

i'm buying some now, but i'm expecting a small dump, 4H is looking bearish and 1D will turn bearish soon too.

Educational Post:

Cup and Handle Pattern

The cup and handle pattern is a bullish continuation pattern that is used to show a period of bearish market sentiment before the overall trend finally continues in a bullish motion. The cup appears similar to a rounding bottom chart pattern, and the handle is similar to a wedge pattern – which is explained in the next section.

Following the rounding bottom, the price of an asset will likely enter a temporary retracement, which is known as the handle because this retracement is confined to two parallel lines on the price graph. The asset will eventually reverse out of the handle and continue with the overall bullish trend.

#NEAR/USDT #LONG BUY : 10.70 - 11.40 LEVERAGE : 5X TARGET...

Near in a bull flag formation upon breakout near could fly high. Keep an eye on 11.6\$ to 11.8\$ resistance if 4hr candle closes above this price. Then near can be good for long for a target of 14.2\$. But near need to break 11.8\$ resistance mark to move upside
